Scale Your Business Efficiently with a Reliable Continuous Deployment Process

Commit your code with end-to-end visibility, and watch your business grow

Empower your team to focus on building powerful software. Armory is purpose-built to help you improve your developers' experience and drive greater efficiency and velocity through software. Through reliable, secure and repeatable deployments, changes can be safely implemented in production without complex custom tooling and manual processes. This means you can spend more time driving value for your business.

Accelerate your time-to-market, increase stability, and decrease customer-impacting issues with Armory. Empower your teams to confidently deploy on commit, every time.

Continuous Deployment-as-a-Service

Continuous Deployment-as-a-Service enables declarative continuous deployment to Kubernetes with GitOps best practices and advanced strategies such as Blue/Green and Canary. Now, developers can focus on building code rather than figuring out how to deploy it.

By orchestrating and automating deployment across all environments, CD-as-a-Service removes DevOps demands on developers as well as reduces risk of service disruptions due to change failures. This not only improves your developer experience but also your customer experience.

Spinnaker Self-Hosted and Managed with Powerful Armory Plugins

Use your cloud and our experts. Armory has industry leading high availability and disaster recovery, scale agent for Kubernetes, pipelines-as-code, policy enforcement, Terraform integration, and secrets management. Uplevel your Spinnaker usage with purpose-built add-ons with unparalleled support.

Armory helps you provide a developer experience that:

· Empowers DevOps efforts and enforce compliance

· Scale Kubernetes deployments and manage your fleet

· Reduce your Terraform Enterprise costs and deploy infrastructure and applications together

· Safely share and version configurations

· Enable GitOps best practices

Your teams can focus on customer experience and creating value for your business.

Policy Engine

Automate the creation and enforcement of policies that govern your software and infrastructure. Ensure you are compliant when you deploy to production. Armory's policy engine employs modern DevSecOps practices that empower users to enforce policies. This removes manual practices and avoids breakdowns and failures.

Expose the policies in your non-production environments so development teams have visibility into the operational requirements as a part of the development lifecycle. Provide development teams the information needed to better understand the amount of risk necessary for their code changes and deployments. Ensure verification of resources deployed at runtime, without interrupting your continuous deployment process.

Scale Agent for Spinnaker & Kubernetes

Avoid downtime and waiting multiple hours to deploy new Kubernetes targets by detecting and streaming changes in real-time. This will improve your performance, scalability, and stability. With a decentralized and optimized caching model, you can eliminate latency issues while managing Kubernetes clusters from within. This means independence for each cluster and eliminates the need to update configuration files and redeploy all of your Spinnaker services, avoiding unnecessary downtime.

Armory Scale Agent for Spinnaker & Kubernetes is a lightweight, real-time agent that scales deployment execution operations from your Spinnaker instance to all of your Kubernetes clusters, limiting the impact on resources and empowering your developers to onboard themselves.

Expert Spinnaker Support

While Spinnaker is open source and free, there are hidden costs in the time engineers will spend installing, monitoring, and upgrading. Armory's Spinnaker Support team has extensive knowledge and experience abstracting away the complexities of Open Source Spinnaker to get you moving as quickly as possible. You do not have to be an expert on installation, upgrade, monitoring, or maintenance when you use Armory. Let your team focus on creating more value for your business.

With Armory, you do not have to wait to see the benefits of Spinnaker. Our expert team can improve your developer experience by optimizing your developer onboarding, configurations, and strategies. Make the most of advanced features and integrate any complementary tool or service. From beginner to advanced, Armory has your back.

At Armory, we ensure your developers are living their dream deployment scenarios. Our software makes the process easy to understand, achievable, and effortless at any scale. We are trusted by thousands of developers because we enable each customer to increase their velocity, stability, and quality, while effortlessly achieving continuous deployment at any scale.

Armory provides a best-in-class developer experience that empowers developers to continuously improve and assure their customers' experience through scalable, safe, reliable, secure, and continuous software deployments.
